The Hidden Web and the connection with terrorism

Andriţa MARIUS[1], Cosmin UNGUREANU[2]

ARTICLE INFO	ABSTRACT
	Many people consider the internet and the world wide web being synonyms, but they are not. The Web is a portion of the internet and a way for the information to be accessed. In the conceptualization of web, many consider it a multitude of websites accessible through the traditional search engines, like Google or Bing. In any case, this content – known as surface web – is just a portion of the web. The Deep-Web refers to a class of content that is on the internet, but not indexed on the search engines for technical reasons. The information on the Deep Web includes content from the intranet private networks (intern network of corporations, governmental agencies or universities) or commercial databases such as Lexis Nexisor Westlaw. Navigating deeper through the web, Dark Web is Deep Web segment which is intentionally hidden.

Contents

1. The structure of the internet
2. The access and navigation on the Dark Web.
3. Communication about and on the dark web
4. Navigation of the Dark Web
5. Illegal activities on the Dark Web.
6. Conclusion
7. Reference Text and Citations
