ABSTRACT

Given the accelerated evolution of the society and of the computer science during the last two decades, we have witnessed the formation of a new environment for committing crimes, namely the online environment. Here the main "weapon" used both by the offenders and by those who represent the law, is the information system or computer (Personal Computer). This has become a vital part of our daily work and the communication technology and the possibilities offered by Internet brought transformations throughout the society, getting in all sectors of economic, social and cultural life.

The fraudulent use of the new technologies is met worldwide and according to statistics, cybercrime has increased alarmingly, leading to the new forms of crime, especially fraud in computers area. In these circumstances, cybercrime is a major problem for those who are using computer technology at large-scale, and in the absence of standardized and universally accepted definitions and the lack of reliable statistics in this area, the study and examination, in legal and criminal point of view, of this new type of crime that swept across the globe, is very important.
